

# Impaired Driving Crashes in Wisconsin

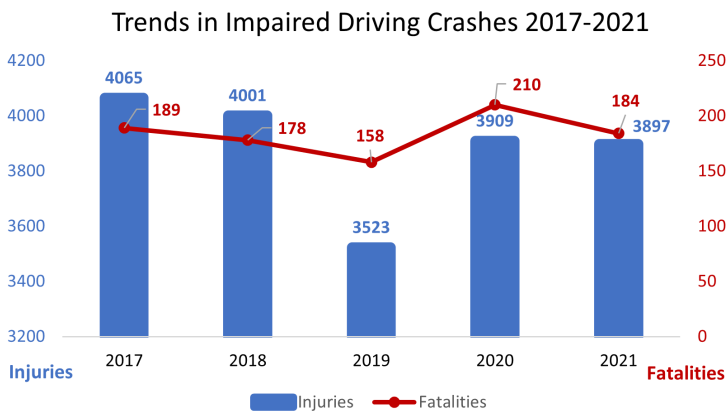

## Did you know...

In Wisconsin, one person was injured or killed in an alcohol or drug impaired crash every 2.1 hours in 2021.

- 7,823 impaired driving crashes occurred in Wisconsin in 2021.
- In these crashes, 184 people were killed and 3,897 people were injured.
- Impaired driving was listed as a contributing factor in 6% of all crashes and in 34% of all fatal crashes in 2021.

## Impaired Driving Crash Trends

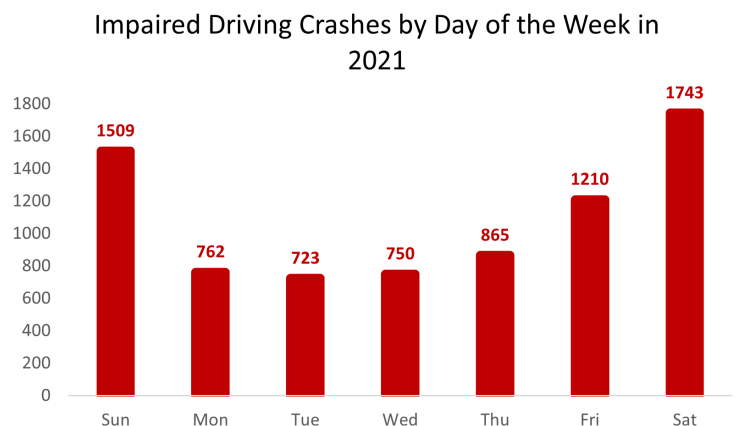

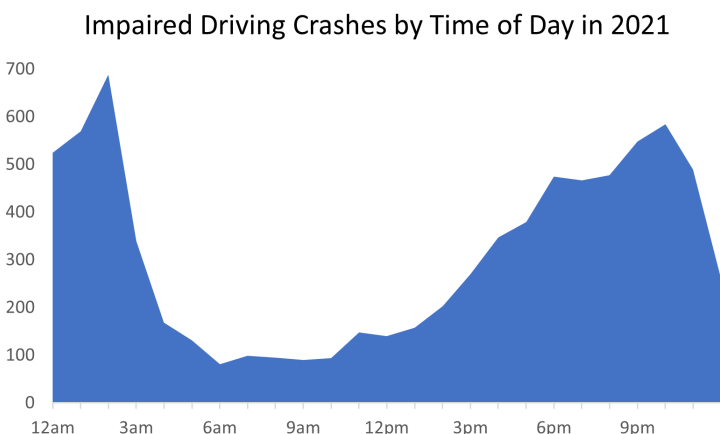

In 2017, impaired driving (OWI) began to include not only alcohol BAC, but also when a driver is found to be under the influence of an intoxicant, controlled substance, or any other drug that impairs their ability to safely operate a vehicle. Drivers can be flagged for suspected impaired driving, as well as subjected to further testing.

Impairment, whether from alcohol or any other type of drug, lessens one's ability to concentrate, make good judgements, and quickly react to situations. It takes roughly 30 minutes to two hours for alcohol to be absorbed into your bloodstream. Moreover, as with any intoxicant, cognitive skills may be delayed, so it is always dangerous to drive after drinking or drug use.

## When do Impaired Driving Crashes Occur?

The majority of impaired driving crashes occur over the weekend with Saturday and Sunday accounting for nearly half of all crashes in 2021, particularly during late night and early morning hours.

Over the day, driver impaired crashes steadily rise after 12 p.m. and peak from 2-3 a.m., after bars close and individuals are returning to their place of residence.

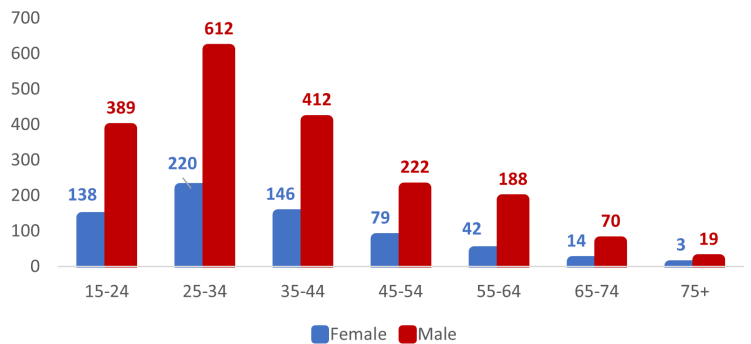

## Who is at Risk for Impaired Driving Crashes?

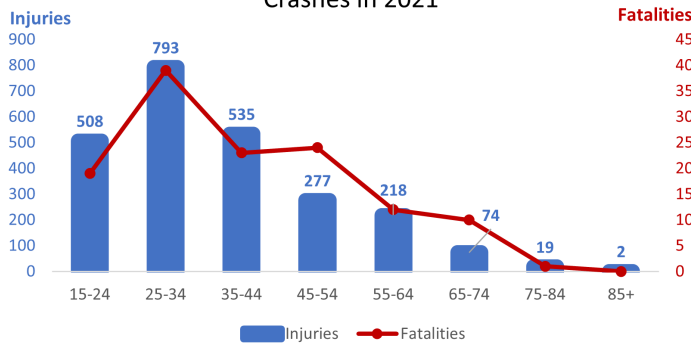

Alcohol or drug consumption can put anyone at risk of causing a crash or other serious injury. However, some populations are more likely to get behind the wheel of a car while impaired.

In 2021, male drivers were twice as likely than females to be suspected of driving impaired in a crash that resulted in a fatality or injury.

Suspected Impaired Drivers in a Crash by Gender & Age in 2021

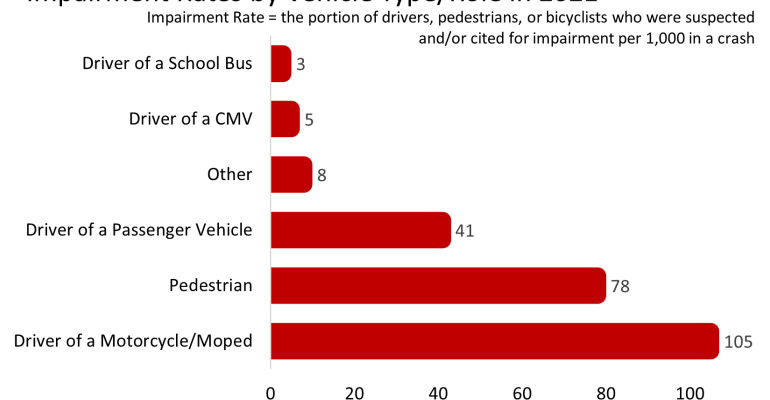

Injuries & Fatalities by Age in Impaired Driving Crashes in 2021

Drivers aged 15-34 accounted for over half of all drivers in impaired driving crashes in 2021. Looking at the age of persons involved in impaired driving crashes, fatalities and injuries generally follow the same pattern as drivers involved in the same type of crash: numbers rise steadily among younger drivers until they dramatically fall when people reach their mid-thirties and forties.

All road users can be impacted by impairment. Impairment includes intoxication from drugs, controlled substances, and alcohol, all of which can increase one's likelihood of being in a crash. Impairment rates, impaired drivers per 1,000 crashes, are actually higher among drivers of motorcycles/mopeds, pedestrians, compared to drivers of passenger vehicles.

Impairment Rates by Vehicle Type/Role in 2021

## What Can You Do?

- Plan a safe ride home before you start the party.
- If someone you know has been drinking, don't let them get behind the wheel.
- If you drink, do not drive for any reason. Call a taxi, a ride-sharing service, or a sober friend.
- If you're hosting a party where alcohol will be served, make sure all guests leave with a sober driver.
- Always wear your seat belt—it's your best defense against impaired drivers.
