I-39/90/94 Corridor Study

The Wisconsin Department of Transportation (WisDOT) and the Federal Highway Administration (FHWA) are conducting the I-39/90/94 Corridor Study between US 12/18 in Madison and US 12/WIS 16 in Wisconsin Dells. The study will also evaluate I-39 from where it splits from I-90/94 to Levee Road near Portage. The study corridor is about 67 miles long and travels through Dane, Columbia, Sauk and Juneau counties.

Project Scope

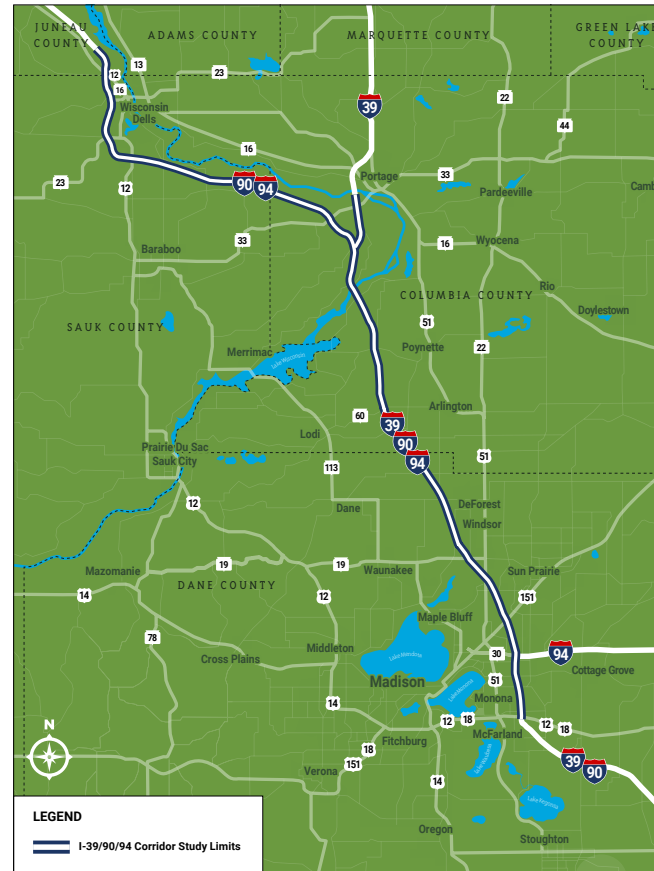

The purpose of this environmental study is to seek public input for the development of alternatives that will address the observed needs of the corridor.

WisDOT's environmental study of the I-39/90/94 corridor will focus on existing and future traffic demands, safety issues, and aging and outdated corridor infrastructure.

As a critical route for recreational travel and freight transport, the I-39/90/94 corridor is of vital importance to the economic health of the region and state.

The environmental study began in spring 2022 with data-gathering tasks. This summer, WisDOT kicks off public outreach efforts and began work to define the study's purpose and need.

The study will be limited to on- and near-alignment alternatives. It will not consider any bypass alternatives that past projects may have presented.

→ Whom to Contact

For more information about the corridor study, please contact:

Frank Pritzlaff, P.E.
Project Manager, I-39/90/94 Corridor Study
