## → STUDY OVERVIEW

# I-39/90/94 Corridor Study

The Wisconsin Department of Transportation (WisDOT) and the Federal Highway Administration (FHWA) are conducting the I-39/90/94 Corridor Study between US 12/18 in Madison and US 12/WIS 16 in Wisconsin Dells. The study will also evaluate I-39 from where it splits from I-90/94 to Levee Road near Portage. The study corridor is about 67 miles long and travels through Dane, Columbia, Sauk and Juneau counties.

### Project Scope

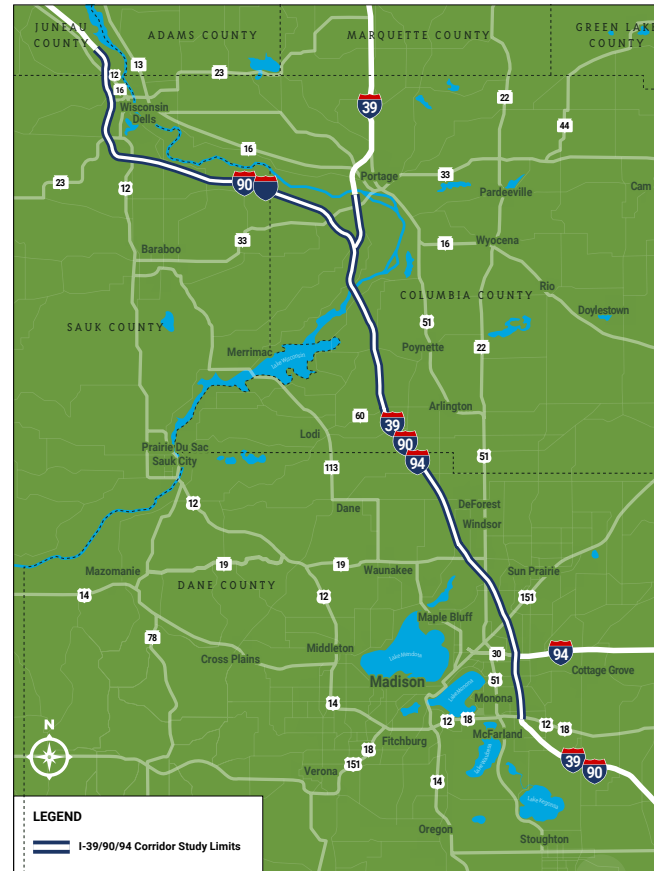

*The purpose of this environmental study is to seek public input for the development of alternatives that will address the observed needs of the corridor.*

WisDOT's environmental study of the I-39/90/94 corridor will focus on existing and future traffic demands, safety issues, and aging and outdated corridor infrastructure.

As a critical route for recreational travel and freight transport, the I-39/90/94 corridor is of vital importance to the economic health of the region and state.

The environmental study began in spring 2022 with data-gathering tasks. This summer, WisDOT kicks off public outreach efforts and began work to define the study's purpose and need.

The study will be limited to on- and near-alignment alternatives. It will not consider any bypass alternatives that past projects may have presented.

### → Whom to Contact

For more information about the corridor study, please contact:

**Frank Pritzlaff, P.E.**

*Project Manager, I-39/90/94 Corridor Study*

### → Stay Up to Date!

WisDOT will provide updated information about the study and public involvement opportunities. Here's how to get involved:

- » Sign up to receive updates
- » Attend public meetings
- » Put up this flyer at your place of business
- » Encourage others to get involved
