

Needs – Pavement Condition

- The majority of the 18-mile corridor was last reconstructed in the 1980s.
- Average age of underlying pavement structure ranges from 8-58 years old.
- Joint failures and cracks show pavement has outlived its useful life.
- Recent projects provide short-term fixes:
 - 2013 - East of Stoughton; between S. Quam Drive and County B/AB
 - 2015 - Silverado Drive/Hoel Avenue to Roby Road
 - 2020 – City of Stoughton; between Hoel Avenue and Page Street
- Continued pavement resurfacing and reconditioning are not cost effective.
