

## US 53 & US 14/61 CORRIDOR STUDY

WISDOT ID: 1630-09-01

## **DETAILED ALTERNATIVES**

**Access Changes** 

Access changes are being considered for both alternatives. These access changes are intended to improve safety by eliminating high-risk turning movements, consolidating access, and removing access points near intersections. The types of access changes being considered include:

Closure of driveways due to their close proximity to signalized intersections.

Closure of driveways due to a history of crashes occurring at the driveway.

Closure of driveways due to the implementation of bicycle facilities. These closures are being considered for alternatives 1A, 2, and 2A only.

Public road access changes.

Changes in driveway access to right-in/right-out due to the installation of medians. These changes are being considered for alternative 2 only.

Despite proposed access changes, all affected properties would be accommodated with reasonable access.
