

Alternatives Development Process

We are at the beginning of the process.
We are looking for your ideas for what will address the corridor needs!

Conceptual Alternatives

A full range of concepts will be identified based on input from local officials, stakeholders, and the public. A high level evaluation will be used to identify the most viable concepts to move forward as the preliminary alternatives.

Preliminary Alternatives

The concepts moving forward will be packaged together to create several alternatives that provide corridor consistency and improve driver expectation. The alternatives that have the best opportunity to address the purpose and need and support the corridor vision will proceed forward.

Detailed Alternatives

A detailed evaluation will be completed on a small set of alternatives to determine the expected improvements to safety, mobility, and community cohesion, along with the anticipated impacts.

Recommended Alternative

The alternative that best meets the purpose and need and minimizes impacts will be the WisDOT recommended alternative.
