## Abbreviated User Guide

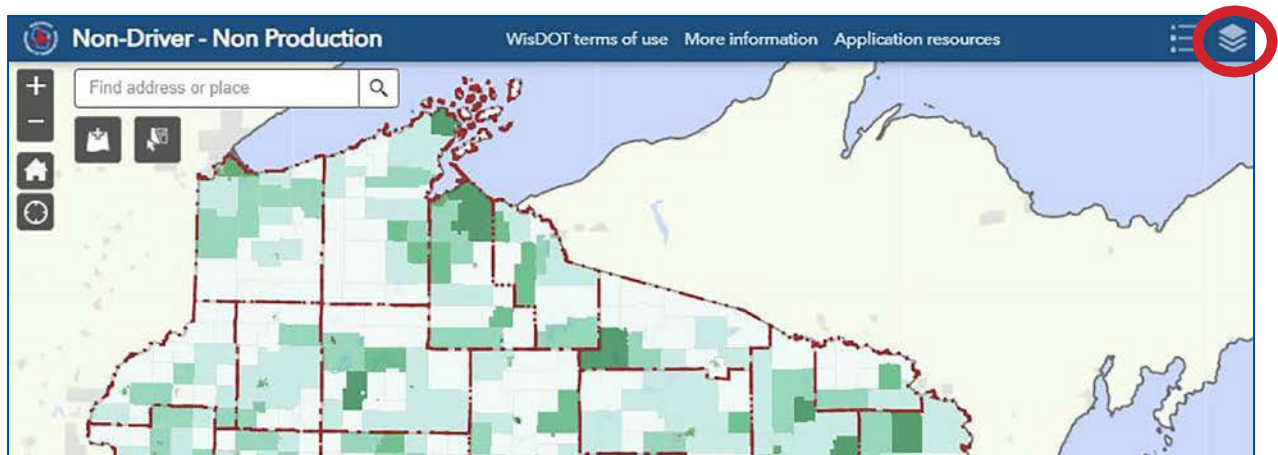

## Non-Driver ArcGIS Online Application Abbreviated User Guide

This abbreviated user guide has been developed to provide an overview of the essential features within Wisconsin Department of Transportation's (WisDOT) [Non-Driver ArcGIS Online Application](#) (Non-Driver Application). The Non-Driver Application produces estimates of non-drivers within Wisconsin counties, cities, villages, towns, U.S. Census Tracts, and U.S. Census Block Groups. The Non-Driver Application is intended to assist state and regional planners, municipal officials, and mobility providers through an increased understanding of where nondrivers are located. This document provides information on the Non-Driver Application's Layer List, how to add a layer and reviewing non-driver data. The expanded user guide can be found [here](#).

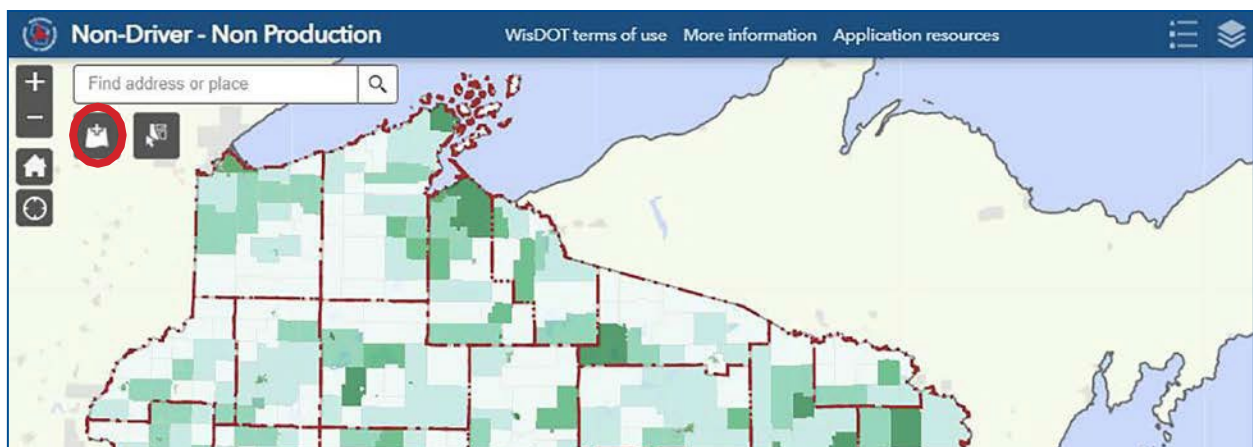

### Layer List

In the upper right-hand corner of the application, clicking the layer icon will produce a sidebar on the right that will show the Layer List and the available layers that can be turned on or off. Clicking the arrow to the left of a layer will expand the layer to provide details about the layer.

### Adding a Layer

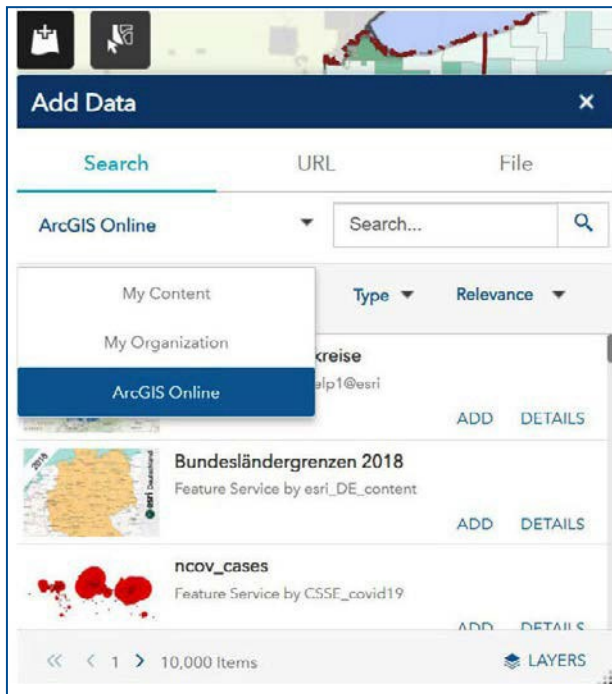

The layer icon will allow you search for available layers in the ArcGIS Online environment. With this feature, users can add publicly available data to the map.

# Non-Driver ArcGIS Online Application

## Abbreviated User Guide

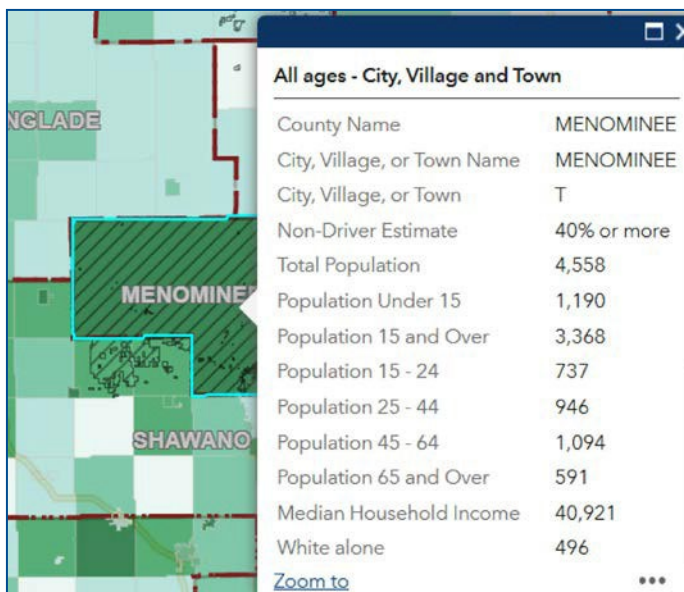

Click the Add layer icon and switch the search environment (default is 'My Organization') to 'ArcGIS Online.' For example, this allows the user to search and overlay published municipal/regional transit layer data.

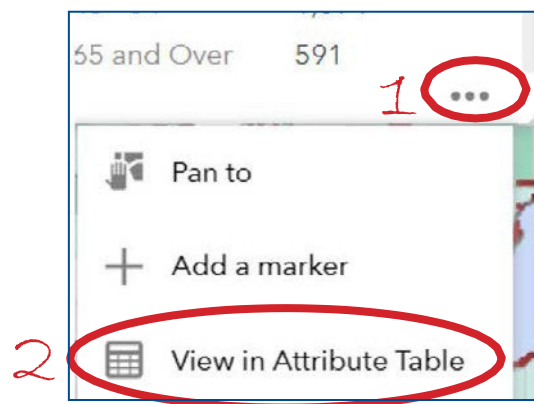

### Reviewing Non-Driver Data

Once a municipality or Census Block Group of interest has been identified, clicking within the geometry (i.e., map) will open a popup box with data (example below) about the geometry, including:

- Non-Driver Estimate: an estimation of the percentage of non-drivers that reside in a selected geometry.
- Total Population and other demographic information from the US Census Bureau.

At the bottom of the pop up, clicking the three dots will give you the option to open an attribute table at the bottom of the screen.
