May 2021

Foreward

The Bureau of Aeronautics has prepared and distributed this airport directory for the purpose of making your flights in Wisconsin safer and more enjoyable.

The information was acquired during surveys and inspections conducted by the bureau. Airports listed are either publicly or privately-owned facilities, available for public-use.

Updates to this directory will be posted on our website:

wisconsindot.gov/arptdir

Due to constantly changing airport conditions, the bureau assumes no responsibility for any action taken by a pilot on the basis of information contained herein. The publisher assumes no responsibility for the accuracy of information presented.

Pilots are reminded that it is their responsibility to check all sources for current information. This includes the FAA Notices to Airmen and the Aeronautical Information Manual, as well as making a visual inspection of the airport before landing or takeoff.

REPORTING ERRORS

You are requested to inform us of errors and/or additions that come to your attention while using this directory. Please contact the WisDOT – Bureau of Aeronautics at boadataupdates@dot.wi.gov

Think safety and fly safely.

Copies are available for purchase at your local FBO, or by mailing \$3.00 to:

Reasons to go fly

We all are aware of the personal or recreational reasons to fly, such as the coveted \$100 burger, weekend fishing trip or afternoon round of golf. But if you are looking for some other excuses to be in the air here are some of our favorite suggestions:

Airport events

wisconsindot.gov/airevents

Fly WI Airport Passport Program stamp

Take someone for their first flight (passengers can earn Passport stamps too).

FAA Safety Seminars

www.faasafety.gov

Flight Training/WINGS Activities

www.faasafety.gov/wings/pub/learn_more.aspx

Talk to your local FBO, flight instructor, FSDO or the WisDOT BOA for more information.

1-800-WX-BRIEF (1-800-992-7433)

www.1800wxbrief.com

It is important to stay proficient with weather knowledge, resources and assessment skills. Be sure to check NOTAMS often for runway / airport condition reports and closure information. The WisDOT offers a one-of-a-kind specialized weather briefing and flight planning tool developed by DTN.

**FL 600
18,000 MSL**

Class A

Class E

AGL – Above Ground Level
FL – Flight Level
MSL – Mean Sea Level

Class B

Class C

class D

Nontowered

700 AGL

Class G

Class G

1,200 AGL

Transponder and ADS-B Operation

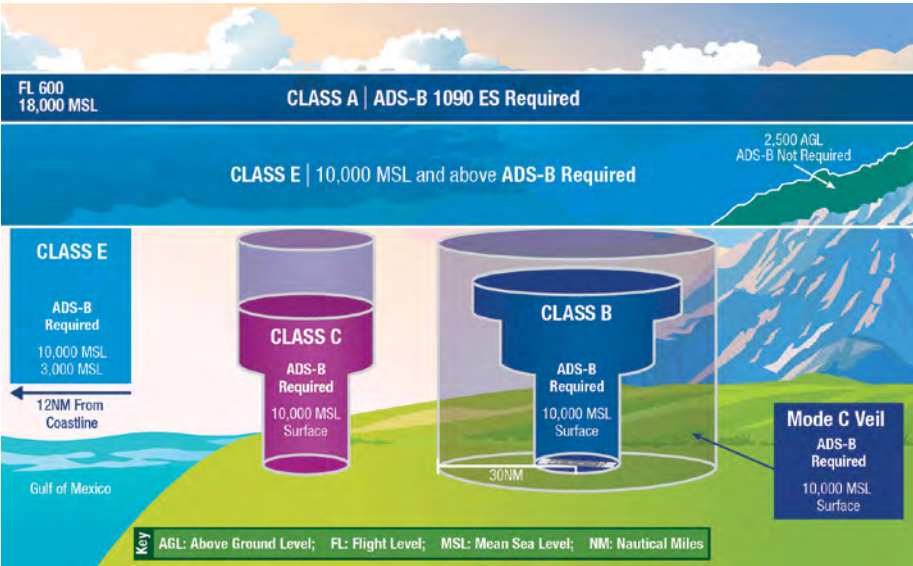

Federal Aviation Regulations requires the transponder, if available, including Mode C altitude encoding, to be on while in all controlled airspace. A transponder with Mode C altitude encoding, is mandatory equipment in the following:

- 1. At or above 10,000' MSL over the 48 contiguous states or District of Columbia, excluding that airspace below 2,500' AGL.
- 2. Within 30 miles of a Class B airspace primary airport, below 10,000' MSL. Balloons, gliders and aircraft not equipped with an engine driven electrical system are excepted when operating outside of Class B airspace.
- 3. Operations within and above all Class C airspace up to 10,000' MSL.

Distinct Transponder Use Codes

- 1200 – VFR
- 7500 – Hijacking
- 7600 – Lost Communications
- 7700 – General Emergency

You must be equipped with ADS-B Out equipment to fly in most controlled airspace. See the figure below and visit www.faa.gov/nextgen/programs/adsb/ for more information.

VFR Cruising Altitudes

If your magnetic course (ground track) is:	And you are more than 3,000 feet above the surface but below 18,000 feet MSL, fly:
0° to 179°	Odd thousands MSL, plus 500 feet (3,500; 5,500; 7,500, etc.)
180° to 359°	Even thousands MSL, plus 500 feet (4,500; 6,500; 8,500, etc.)

Coordinated Universal Time

The FAA uses Coordinated Universal Time (UTC) for all operations. The term “ZULU” is used when ATC procedures require a reference to UTC.

To convert from Central Time to Coordinated Universal Time (UTC):

- Central Standard Time + 6 hours = UTC Winter
- Central Daylight Time + 5 hours = UTC Spring to Fall

10 Ways to Help Prevent Runway Incursions

1 See the “Big Picture”

Monitor both ground and tower communications when possible.

2 Transmit Clearly

Make your instructions and read backs complete and easy to understand.

3 Listen Carefully

Listen to your clearance. Listen to what you read back. Do not let communications become automatic.

4 Copy Clearances

Clearances can change. Keep a note pad and copy your clearance. If needed refer to your notes.

5 Situational Awareness

Know your location. If unfamiliar with an airport keep a current airport diagram available for easy reference.

6 Admit When Lost

If you get lost on an airport ask ATC for help. Better to damage your pride than your airplane.

7 Sterile Cockpit

Maintain a sterile cockpit until reaching cruising altitude. Explain to your passengers that talking should be kept to a minimum.

8 Understand Signs, Lights and Markings

Keep current with airport signs, lights and markings. Know what they mean and what action to take.

9 Never Assume

Do not take clearances for granted. Look both ways before entering or crossing taxiways and runways.

10 Follow Procedures

Establish safe procedures for airport operations. Then follow them.

For more information see the following:
www.faa.gov/airports/runway_safety/

Notices to Airmen (NOTAMS)

The following websites provide listings and information concerning NOTAMS and Temporary Flight Restrictions (TFRs)

- www.faa.gov/about/initiatives/notam
- tfr.faa.gov/tfr2/list.html
- www.faa.gov/air_traffic/publications/notices

The FAA has also redeveloped FIELD CONDITIONS (FICON) REPORTING. Surface conditions on runways, taxiways, and aprons are shown using FICON NOTAMS and runways may have a numerical condition code assigned for braking action.

EXAMPLE:

...FICON 4/4/4 50 PRCT COMPACTED SN PLOWED 75FT WID REMAINDER 1/2IN DRY SN...

Ensure you fully understand FICON NOTAMS by visiting the following website www.faa.gov/about/initiatives/talpa/media/TALPA-Airport-RCAM.pdf or ask your local Airport Manager or Flight Instructor for more information.

ASSESSMENT CRITERIA		DOWNGRADE ASSESSMENT CRITERIA		
Runway Condition Description	Code	Mu (μ)	Vehicle Deceleration or Directional Control Observation	Pilot Reported Braking Action
• Dry	6	40 or Higher	—	—
• Frost • Wet (includes damp and 1/8 inch depth or less of water) 1/8 inch (3mm) depth or less of • Slush • Dry Snow • Wet Snow	5		Braking deceleration is normal for the wheel braking effort applied AND directional control is normal.	Good
5° F (–15°C) and colder outside air temperature • Compacted Snow	4	39 to 30	Braking deceleration OR directional control is between Good and Medium	Good to Medium
• Slippery When Wet (wet runway) • Dry Snow or Wet Snow (any depth) over Compacted Snow Greater than 1/8 inch (3mm) depth of • Dry Snow • Wet Snow Warmer than 5°F (–15°C) outside air temperature • Compacted Snow	3		Braking deceleration is noticeably reduced for the wheel braking effort applied OR directional control is noticeably reduced.	Medium
Greater than 1/8 inch (3mm) depth of • Water • Slush	2	29 to 21	Braking deceleration OR directional control is between Medium and Poor.	Medium to Poor
• Ice	1		Braking deceleration is significantly reduced for the wheel braking effort applied OR direction control is significantly reduced.	Poor
• Wet Ice • Slush over Ice • Water over Compacted Snow • Dry Snow or Wet Snow over Ice	0	20 or Lower	Braking deceleration is minimal to non-existent for the wheel braking effort applied or directional control is uncertain.	Nil

Visual Approach Slope Systems

More runways are being served by some type of visual approach slope system. While the reasoning for each system is the same, to increase safety, the various indications differ and need to be pointed out.

System	Below Glide Path	On Glide Path	Above Glide Path
VASI			
Lights are visible 3 – 5 miles during the day, up to 20 miles or more at night.			
PAPI			
Lights have an effective visual range of about 5 miles the day and 20 miles at night.			
PLASI	Pulsating Red	Steady White or Alternating Red / White	Pulsating White
It is possible to mistake high or low indications as aircraft or vehicles on the ground. Useful range is about 4 miles day and up to 10 miles at night.			
Element Alignment System			
System is composed of painted panels, may be lighted for night.			

Recommended Communication Procedures

See FAA Advisory Circular 90-66B for non-towered airport operations guidance.

BROADCAST POSITION				
Facility	Frequency Use	Outbound	Inbound	Practice Instrument Approach
1. UNICOM (No Tower)	Communicate with UNICOM station on published CTAF frequency. If unable to contact UNICOM station, use self-announce procedures on CTAF.	Before taxiing and before taxiing on the runway for takeoff.	Ten miles out, entering downwind, base and final. Leaving the runway.	Departing final approach segment inbound. Approach completed / terminated.
2. No tower, FSS, or UNICOM	Self-announce on MULTICOM frequency 122.9			
3. Tower not in operation	Self-announce on CTAF.			

ADDITIONAL FREQUENCIES	
121.5	Emergency
122.0	Enroute Flight Advisory Service (Flight Watch)
121.75 or 122.85	Air to Air Communications
122.95	UNICOM for Airports with a Control Tower

Obtaining Emergency Assistance

Pilots who become apprehensive for their safety, for any reason, should request assistance immediately. To increase your chances of contacting help, remember the four **C's**:

1. **C**onfess your predicament – to yourself and to any ground radio station.
2. **C**ommunicate – pass on as much information as needed or requested.
3. **C**limb, if possible, for better radar and DF detection. Radio contact range is also increased with altitude.
4. **C**omply with advice and instructions received. Pilots of IFR flights experiencing two-way radio failure, while in IMC, are expected to adhere to the procedures set forth in FAR 91.185; IFR operations: Two-way radio communications failure.

A pilot in any distress or urgency condition should immediately take the following action, not necessarily in the order listed, to obtain assistance:

1. Obtain and/or maintain radio contact with an air traffic facility. While in radio contact, continue squawking your assigned transponder code and if available Mode C, altitude encoding, unless instructed to do otherwise.
2. If equipped with a transponder and unable to establish voice communications, squawk the emergency code 7700, and if available Mode C altitude encoding.
3. Transmit a distress or urgency message immediately.
 - A. If distress, MAYDAY, MAYDAY, MAYDAY;
if urgency, PAN-PAN, PAN-PAN, PAN-PAN.
 - B. Name of station addressed.
 - C. Aircraft identification and type.
 - D. Nature of distress or urgency.
 - E. Weather.
 - F. Pilot's intentions or request.
 - G. Present position and heading, or if lost, last known position, time and heading since that position.
 - H. Altitude.
 - I. Fuel remaining in hours and minutes.
 - J. Number of people on board.
 - K. Any other useful information.

After establishing radio contact, comply with advice and instructions received. Cooperate. Do not hesitate to ask questions or clarify instructions when you do not understand or if you cannot comply with a clearance.

Pilot Guide to Airport Signs and Markings

Airport Signs

TYPE OF MARKING	ACTION OR PURPOSE	TYPE OF MARKING	ACTION OR PURPOSE
 4-22	TAXIWAY / RUNWAY HOLDING POSITION: Hold short of intersecting runway		RUNWAY BOUNDARY: Exit boundary of runway or approach protected areas
	RUNWAY / RUNWAY HOLDING POSITION: Hold short of intersecting runway		ILS CRITICAL AREA BOUNDARY: When exiting runway, sign shows boundary of ILS Critical Area
	RUNWAY APPROACH HOLDING POSITION: Hold short of protected area when instructed by ATC		RUNWAY EXIT: Defines direction and designation of exit taxiway from runway
	ILS CRITICAL AREA HOLDING POSITION: Hold short of ILS critical area when instructed by ATC		TAXIWAY DIRECTION: Defines direction and designation of intersecting taxiway(s)
	NO ENTRY: Identifies paved areas where AIRCRAFT entry is prohibited		OUTBOUND DESTINATION: Defines direction to take-off runway(s)
	TAXIWAY LOCATION: Identifies taxiway on which vehicle / aircraft is located		INBOUND DESTINATION: Defines directions for arriving aircraft
	RUNWAY LOCATION: Identifies runway on which vehicle / aircraft is located		TAXIWAY ENDING MARKER: Indicates taxiway does not continue
	RUNWAY DISTANCE REMAINING: Indicates runway distance remaining in increments of 1,000 feet		DIRECTION SIGN ARRAY: Identifies location in conjunction with multiple intersecting taxiways

ATCT Light Gun Signals

COLOR AND TYPE OF SIGNAL	AIRCRAFT ON THE GROUND	AIRCRAFT IN FLIGHT
STEADY GREEN 	Cleared for takeoff	Cleared to land
FLASHING GREEN 	Cleared for taxi	Return for landing
STEADY RED 	STOP	Give way and continue circling
FLASHING RED 	Taxi clear of the runway in use	Airport unsafe, do not land
FLASHING WHITE 	Return to starting point on airport	—
ALTERNATING RED / GREEN 	EXERCISE EXTREME CAUTION	

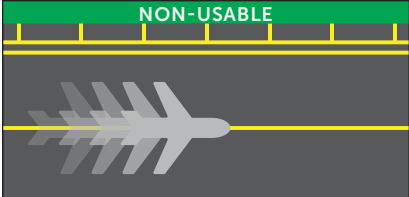

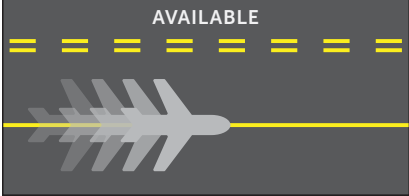

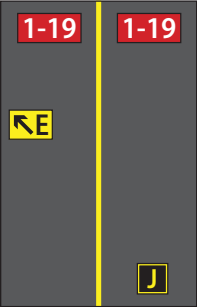

ELEVATED
GUARD LIGHTS
HOLD SHORT

IN-PAVEMENT
GUARD LIGHTS
HOLD SHORT

Pilot Guide to Airport Signs and Markings (continued)

Airport Markings

TYPE OF MARKING	ACTION OR PURPOSE	TYPE OF MARKING
	HOLDING POSITION: Hold short of intersecting runway; also a land-and-hold-short marking	
	HOLDING POSITION WITH ENHANCED TAXIWAY CENTERLINE: Alerts of an approaching runway	ACTION OR PURPOSE
	ILS CRITICAL AREA: Hold short when instructed by ATC	SOLID TAXIWAY EDGE: Defines edge of usable, full-strength taxiway pavement; adjoining pavement NOT USABLE
	TAXIWAY/TAXIWAY HOLDING POSITION: Hold short of intersecting taxiway when directed by ATC	TYPE OF MARKING
	(NON) MOVEMENT AREA BOUNDARY: Defines boundary of movement area and non-movement area	
	SURFACE PAINTED HOLDING POSITION: Designates runway ahead in conjunction with yellow holding position marking	ACTION OR PURPOSE
	SURFACE PAINTED TAXIWAY DIRECTION: Direction and designation of intersecting taxiway	DASHED TAXIWAY EDGE: Defines edge of taxiway where adjoining pavement or apron IS AVAILABLE for taxi
	SURFACE PAINTED TAXIWAY LOCATION: Identifies taxiway on which aircraft is located

**Rules Pertaining to Aircraft Accidents, Incidents,
Overdue Aircraft and Safety Investigations**

[National Transportation Safety Board, Procedural Regulation, 49 CFR 830 (in part)].

1. IMMEDIATE NOTIFICATION

The operator of an aircraft shall immediately, and by the most expeditious means available, notify the nearest National Transportation Board, Bureau of Aviation Safety Field Office when:

A. An aircraft accident of any of the following listed incidents occur:

1. Flight control system malfunction or failure.
2. Inability of any required flight crew member to perform normal flight duties as a result of injuries or illness.
3. Failure of any internal turbine engine component that results in the escape of debris other than out the exhaust path.
4. In-flight fire.
5. Aircraft collide in flight.
6. Damage to property, other than the aircraft, estimated to exceed \$25,000 for repair (including materials and labor) or fair market value in the event of total loss, whichever is less.
7. For large multiengine aircraft (more than 12,500 pounds maximum takeoff weight).
8. In-flight failure of electrical systems which requires the sustained use of an emergency bus powered by a backup source such as a battery, auxiliary power unit, or air driven generator to retain flight control or essential instruments.
9. In-flight failure of hydraulic systems that results in sustained reliance on the sole remaining hydraulic or mechanical system for movement of flight control surfaces.
10. Sustained loss of the power or thrust produced by two or more engines.
11. An evacuation of an aircraft in which an emergency egress system is utilized.
12. Release of all or a portion of a propeller blade from an aircraft, excluding release caused solely by ground contact.

(continued next page)

Rules Pertaining to Aircraft Accidents, Incidents, Overdue Aircraft and Safety Investigations *(continued)*

- 13. A complete loss of information, excluding flickering, from more than 50 percent of an aircraft’s cockpit displays known as:
 - Electronic Flight Instrument System (EFIS) displays;
 - Engine Indication and Crew Alerting System (EICAS) displays; Electronic Centralized Aircraft Monitor (ECAM) displays; or
 - Other displays of this type, which generally include a primary flight display (PFD), primary navigation display (PND), and other integrated displays; Airborne Collision and Avoidance System (ACAS) resolution advisories issued either:
 - When an aircraft is being operated on an instrument flight rules flight plan and compliance with the advisory is necessary to avert a substantial risk of collision between two or more aircraft; or
 - To an aircraft operating in class A airspace.
- 14. Damage to helicopter tail or main rotor blades, including ground damage, that requires major repair or replacement of the blade(s).
- 15. Any event in which an operator, when operating an airplane as an air carrier at a public-use airport on land:
 - Lands or departs on a taxiway, incorrect runway, or other area not designed as a runway; or
 - Experiences a runway incursion that requires the operator or the crew of another aircraft or vehicle to take immediate corrective action to avoid a collision.

B. An aircraft is overdue and is believed to have been involved in an accident.

Accident Reporting Numbers

In the event of an aircraft accident or incident, contact the local FSDO office or call the FAA Great Lakes Regional Operations Center 24-hour telephone number **(817) 222-5006**.

Securing Aircraft

- Always secure aircraft and airport property with multiple layers of security
- Control access to aircraft door and ignition keys
- Report suspicious activity to **1-866-GA-SECURE**
- Report criminal activity to **911**

To report suspicious or unusual activity
1-866-GA-SECURE (1-866-427-3287)
911 for an emergency or if danger is imminent

Glossary

- 1. Page Number..... 1, 2, 3, 4, ...
- 2. Airport Name..... Name of the airport
- 3. Airport FAA ID.....FAA airport identifier
- 4. Airport Location ... Airport location expressed as distance and direction from the center of the associated city in nautical miles and cardinal points
- 5. TWR/CTAF..... Control Tower Frequency or Common Traffic Advisory Frequency
- 6. GND CON Ground control frequency
- 7. ATIS / AWOS / ASOS Automatic Terminal Information Service frequency / Automated Weather Observing Systems / Automated Surface Observing System
- 8. UNICOM..... Local airport advisory frequency
- 9. CLNC DEL Clearance delivery frequency
- 10. APP/DEP..... Approach control and departure control frequency
- 11. FSS / GCO / RCO Flight Service Station / Ground Communication Outlet / Remote Communication Outlet
- 12. Elevation Field elevation of the highest point on the runway surface (MSL)
- 13. TPA Traffic Pattern Altitude (MSL)
- 14. VOR VOR frequency and identifier
- 15. VOR Bearing Radial and distance from VOR to airport in nautical miles
- 16. NDB..... Frequency and identifier of NDB located on the field
- 17. FUEL Type and octane of fuel available
- 18. FBO Fixed Base Operators who provide fuel or maintenance
- 19. Notes Operational information regarding the status and usability of the airport
- 20. Cold temperature.. Denotes cold temperature restricted airport. Altitude correction required at or below temperature indicated.
- 21. Fly Wisconsin Airport Passport Program Passport stamp location
- 22. Address Address/location of airport
- 23. LAT / LONG Approximate latitude and longitude of the center of the airport
- 24. Associated City Name of city associated with the airport
