SUBJECT: July 2020 Bridge Manual Update

BOS is making the move to AutoCAD from Microstation. With Microstation CONNECT Edition having a completely new interface to learn, we felt it was time to make the switch to the CADD platform utilized by Civil 3D. We hope to have our standard insert sheets converted by early 2021, but will keep the existing Microstation versions available for some period after that.

FYI: If you work in Microstation, Bentley is no longer supporting version SS10 as of January 1, 2021. (SS4 is currently not supported). CONNECT will be required for support.

The Bridge Manual revisions to text and standards are now complete and posted online for this six-month cycle. Please see the attached sheets for a list, with brief explanation, of the Text and Standards that were revised.

Of particular interest in this edition:

- **Chapter 2:** Updated guidance on assigning structure numbers and posted structure number request forms on the Structures website - [Maintenance & Inspection Section](#).

- **Chapter 36:** Added guidance on metal buried structure usage. Rigid reinforced concrete structures are still recommended over metal structures, especially for higher volume roadways.

- **Chapter 39:**
  - Standardized Plans: Updated Standard Design Truss designations, updated bid items, and provided several minor changes.
  - Added two examples: E39-1: Design of Foundation Cap Beam / Integral Barrier TL-5 Loading and E39-2: Design of Sign Bridge Concrete Column for Vehicle Impact

- **New Chapter 43 – Structures Asset Management: Maintenance Work:** In conjunction with Chapter 41, works to implement Chapter 42, with an emphasis on bridge maintenance actions most often performed through the annual Highway Maintenance Work Plan (HMWP).

- **Chapter 45:**
  - Added guidance on bridge ratings for Emergency Vehicles (EVs)
  - Removed Culvert Load Rating Summary Form
  - Updated Bridge Load Rating Summary Form

- **Standard 15.03:** Updated Note to include bid item “Pipe Underdrain Wrapped 6-inch” to clarify underdrain was not incidental to “Slope Paving Concrete”.
• **Standard 30.14:** Updated Anchor Rod Assembly Details. All contracts with a November 2020 letting or later shall use the new bid item “Anchor Assemblies Poles on Structures” (531.8990) per the 2021 Standard Specification. Bid item “Anchor Assemblies Light Poles on Structures” (657.6005) has been retired. Several inserts have been updated based on these changes.

Most other changes are fairly minor. Please use the example calculations with care (follow along in AASHTO). A vertical black bar in the left margin notes all text changes.

The user's feedback regarding the Bridge Manual is important to us as that is where we get many ideas for corrections, clarification and new ideas for enhancement.
