

The Bridge Technical Committee (BTC) consist of the “bridge community” members that include WisDOT business areas, WTBA contactor members, agencies (FHWA & DNR); materials suppliers, product fabricators; and consultant engineers.

The function of the BTC is to serve the Wisconsin transportation structures community by providing a regular forum for discussion of emerging issues and updates to ongoing efforts. This forum provides all partners and stakeholders the opportunity to share concerns and contribute experience to improve our structures related details, standards, provisions, policies, and practices. This forum also provides the opportunity to share with industry information related to broad initiatives, research activities, and new technologies.

Our activities include:

- Updates on current and future Let projects with significant structures work
- Identification and resolution of issues that affect current and future projects
- Outreach on initiatives and research including identification of needed research
- Presentation of new technologies and practices
- Formation of sub-committees and work groups to develop solution for identified issues
- Delegation of topics to subcommittees
