

## December 2023 Solicitation Questions and Responses

Solicitation	Project	Question	Response
NC-01	9165-13-02	Will the culvert be replaced under full road closure? If so, will detour plans be needed?	Needs to be evaluated during design, but currently anticipating replacement under flagging.
NW-01	1195-06-33	Is special coordination for the Wild Rivers Trail beneath Structure B-03-0057 anticipated?	Yes, special coordination is expected. A temporary gravel bypass for the Wild Rivers Trail is anticipated to detour recreational vehicles around the construction zone as part of the project. 4(f) determination has not been fully made, but the land is owned by the DNR, and additional coordination with the DNR will be required regardless of 4(f) status.
SW-01	5130-05-05	Replacing select cross drain culverts is identified as part of the improvement. Has the Department identified which culverts will need to be replaced and can you share information related to their size?	Four culverts are proposed for replacement. Three of the culverts are 24" diameter, one is 72" diameter.
SW-01	5130-05-05	To what extent (i.e. Phase II ICE Report) has the Department completed investigations/documentation determining the feasibility of the roundabout at STH 131 and CTH A?	The Phase 1 ICE report has been approved by BTO. No additional ICE reports are required.
SW-01	5130-05-05	With the road profile raising approximately 2" throughout the corridor (based on the improvement concept outlined in the solicitation), is the road elevation expected to return to existing in order to match the Council Creek bridge just north of Hockey Ave, or is this bridge deck expected to be raised/replaced as well? Preliminary and final bridge design are listed as consultant requirements, but understanding what the scope of the bridge work entails would be beneficial.	No structure work is included with the project.
